BAYLINE

A PRODUCT BY **FONNEBUST**
MADE IN NORWAY

TOOL MANAGEMENT FOR MACHINE SHOPS

Know where every tool, gauge and machine stands. Right now.

The **shop-floor register** for CNC and machining workshops. Tools, consumables, gauges and machine service in one place, **cloud hosted or on your own server**.

Tools & consumables

Stock per bin, serial-tracked tools, and who or which machine has what. Scan a QR label to open it.

Gauges & calibration

Calibration due by date, by number of uses, or both. Overdue and due-soon gauges stand out.

Machines & service

Meter readings, service plans and task checklists. Full service history with CSV export.

Live Board

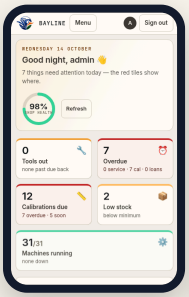

Tools out, overdue, calibrations due, low stock and machines running, plus signals for low stock and unusual use.

Made for agents

Scoped agent keys, propose-only by default: bigger changes wait for a person. HTTP API, MCP and skill.md.

Find it fast

Type-to-search pickers match code, name or alias, so long lists of tools, gauges and machines stay quick.

BOARD

SERVICE TASK

Office to floor

One register in the browser, on a PC or a phone, with glove-size buttons.

Check the Board, then work through a service checklist right at the machine.

Cloud or on-site. Your choice.

Cloud hosted
Run for you by Fonnebust. Just open a browser.

Your own server
Docker on your hardware, on your LAN or Tailscale.

- **Two-step sign-in**, optional HTTPS on-site, and **roles**: admin, superuser, crib, maintenance, quality, viewer.
- **Backup & restore** from the browser. Every change is logged, and most can be undone.
